# DataSelf
DATA WAREHOUSING

Optimize Data for Improved Reporting & Analysis

ETL+ gathers data from all databases including ERP, CRM, payroll and others.
It then creates a central repository (data warehouse) where
both current and historical data can be housed, accessed, and reported on.

Extract & Transform Data for Insight

Reports are only as good as the data they report on.
DataSelf's ETL+ Data Warehouse optimizes your raw data for superior reporting and analytics.
It transforms data into insight.

Data Warehousing Benefits

ETL+ streamlines, organizes, and consolidates data with:

- **Speed**
  By optimizing raw data, ETL+ streamlines report generation and produces most reports in under ten seconds – without slowing down the source systems.

- **Organization**
  ETL+ removes extraneous details and creates 'smart metrics' that yield strategic insight.

- **Single version of the truth**
  ETL+ corrects data errors, omissions, and inconsistencies; while providing a centralized platform to maintain "a single version of the truth".

The Results of ETL+

- **Easier** reporting due to simplified data components in the data warehouse

- **Faster** reporting

- **Improved** performance, assessment & forecasting

- **Data consistency & security**

- **360-degree view** of the business
